Project Proposal: The Caesium Initiative

Date: May 8, 2026
Authors: President of Computer Club & President of STEM Society
Alliance: Caesium Alliance

Abstract

The Caesium Alliance aims to leverage the combined expertise of the Computer Club and the STEM Society to solve critical infrastructure challenges within the school. By moving from manual, paper-based protocols to automated digital systems, we intend to enhance academic resource accessibility and administrative efficiency.

I. Problem Statement

Currently, the school faces two significant hurdles in its academic environment:

- **Library Inefficiency:** The use of physical logbooks for attendance and book tracking is prone to errors, data loss, and delays in returning materials.
- **Digital Divide:** Students face high costs and connectivity issues when trying to access past examination questions and study materials online.

II. Proposed Solutions

1. The Digital Library & Attendance Portal

We propose replacing the physical logbooks with a dedicated laptop-based management system. This system will feature:

- **Automated Attendance:** Rapid check-in and check-out for students entering the library.
- **Return Timers:** An automated tracking system that flags overdue books, ensuring fair resource distribution.
- **User Interface:** A clean, professional dashboard designed by the Computer Club.

2. The Caesium Vault (Local Academic Server)

A localized server hosted on the school’s internal network acts as a "data-free" repository for students.

Feature	Technical Requirement	Student Benefit
Past Questions Archive	Local Database / File Server	Zero data cost for downloads
Study Guides	PDF Storage Repository	Instant access to curricula
Club Project Files	Collaborative Shared Folders	Easy cross-club collaboration

III. Methodology & Timeline

The project will be executed in three primary phases:

1. **Research & Survey:** Deploying Google Forms via QR codes to gather student feedback.
2. **Development:** Computer Club handles software/database coding; STEM Society manages hardware/server configuration.
3. **Deployment:** Official launch and training for library staff and student body.

IV. Conclusion

The Caesium Alliance is committed to setting a new standard for school innovation. By integrating these systems, we move from "existing protocols" to a future of precision and progress.

The Computer Club and STEM Society have formed the Caesium Alliance to bring high-precision solutions to our school.
