11TH GRADE SCIENCE

INTRODUCTION: What is Vibe Coding

Vibe Coding means you describe what you want in plain English, and an AI Agent handles the technical heavy lifting. It is a shift in software development where the programmer acts more like a director than a manual typist.

* You are the Architect: You don't need to know how to mix concrete (write syntax); you just need to know where the walls should go (the logic).

* The Agent is the Builder: You tell the Antigravity Agent, "Add a title that says 'Welcome to Central High'," and it writes the code for you.

* Conversation is Coding: If you don't like a result, you just talk to the agent to fix it. "Make that title bigger" is a valid command.

Even a 7 year old can build a website with vibe coding.

MATERIALS

1. You'll need a laptop
2. You'll need the antigravity app and a Google account
3. You'll need Internet connection

PROCEDURE

1. Download the antigravity app
2. Login with your Google account
3. Download the live server extension
4. Create an html file (for the project)

Project Time Table

We'll focus on understanding how to talk to the agent to build a school website (tunwase) step by step.

Weeks	Goal	Activity

Week 1: Introduction	Learn how to give Prompts	Open Antigravity Agent Manager and ask it to create a “welcome to tunwase high school” page.
Week 2:The Skeleton (HTML Basics)	Understand the bones of a website	Ask the Agent to create a page with a Header (top), a Body (middle), and a Footer (bottom).
Week 3: Adding Content	Putting real school info on the page.	Tell the Agent to add a list of school clubs and some paragraphs about the school's history.

RESULTS

Week 1: Introduction to the Agent

- Lesson: Understanding that the Agent follows your specific instructions.

Week 2: The Skeleton (HTML Basics)

- Lesson: Learning that websites have a structure, even if the Agent builds it.

Week 3: Adding Content

- Lesson: How to organize text and lists in a digital format.

Week 4: The Visuals (CSS Basics)

- ***Goal: Making it look good.***
- ***Activity: Ask the Agent to "Change the background color to our school colors" and "Center the text."***
- ***Lesson: Understanding that "Style" is separate from "Structure."***

CONCLUSION: Understanding the "Vibe" Process

Understanding the "Vibe" Process

When using the Agent Manager, the "Code" is the output, but your Prompt is the input. Here is an example:

Step 1: The First Command

Type this into the Agent:

- Create a basic webpage for our school. Put the school name at the very top in big letters, and write 'Welcome to our coding project' underneath it."

Step 2: The Analysis

Once the Agent generates the code, you can show the everyone that progress is being made:

* The <h1> tag usually holds the "Big Letters."

* The <p> tag usually holds the "Paragraph" or smaller text.

THANK YOU
